dynamics and ...**

In the atmospheric boundary layer, typical values of  $l = 1000$  m and  $K = 0.001$  m, yield a Reynolds number of  $O(10^8)$ . Solving all length scales up to  $0.001$  m on a domain of  $10$  km  $\times$   $10$  km  $\times$   $1$  km using a numerical program would require  $10^{20}$  grid points, whereas computation on a grid with  $10^{10}$  points is currently

## Boundary Layer Meteorology, Stull Solutions

Over the last 100 years, boundary layer meteorology grew from the subject of mostly near-surface observations to a field encompassing diverse atmospheric boundary layers (ABLs) around the world. From the start, researchers drew from an ever-expanding set of disciplines—thermodynamics, soil and plant studies, fluid dynamics and turbulence.
